

## Disaster Recovery

Whether fire, natural disasters, an industrial dispute, hardware failure or denial of service attacks, today's businesses are facing threats to a disruption in their operations from many areas. Planning to mitigate the effects of these potentially devastating events is increasingly becoming the priority for smart businesses.

### Challenge

Ongoing threats to businesses are prevalent at every turn – ranging from simple mistakes that can disrupt operations to major incidents that can disrupt entire neighbourhoods. However, businesses still need to maintain operations, service customers and plan to mitigate the effects of any business outage.

How long could any business survive without access to email, core IT systems, even the physical office? How soon would it be before customers start to buy from your competitors if you cannot service orders or answer queries?

Planning for disruptions in advance, mitigates the headaches when they occur, guarantees ongoing customer service and preserves your position with customers, whilst ensuring your business survives intact.

# Our experienced consultants will work to understand the profile of your company's data and help you determine the most crucial data sets to be replicated, saved and restored if a disruption occurs.

## Solution

To plan for the worst case scenario and hope for the best is the most appropriate solution. Brennan understands the data and technology needs that keep a business operating during periods of disruption and can make a real difference to how you cope with business disruptions.

Our experienced consultants will work to understand the profile of your company's data and help you determine the most crucial data sets to be replicated, saved and restored if a disruption occurs. With state-of-the-art Data Centre facilities in Sydney and Brisbane, your crucial business data can be stored and archived across multiple geographic locations, making it even more secure whilst providing heightened levels of protection against data loss.

## Features

- **Disaster Recovery planning and scoping services** – Our consultants will work with you to produce a detailed disaster recovery plan, determine key data sets and help draft procedures where appropriate.
- **World-class Data Centre facilities** – Our state-of-the-art facilities located in Sydney and Brisbane are ideally suited as a core part of your Disaster Recovery plans, from simple provision of floor space for customer to co-locate their own equipment, to the live mirroring of data for immediate restoration.
- **Data and information replication** – Crucial business data and virtual machines can be mirrored and replicated and stored off-site in diversely secure facilities to ensure high availability and swift restoration if necessary.

- **Hot-desk facilities** – As part of an integrated approach to ensure our customers suffer minimal disruption from business interruption, we offer a range of hot desk facilities to enable your staff to relocate to our offices, access their crucial data, even gain access to new computing hardware and get back to work again.
- **Experienced staff** – Our staff have a great deal of experience in planning for that exceptional event that might disrupt operations and we believe there is absolutely no substitute for that experience.

## Benefits

- **Rapid restoration of operations** – Our solutions provide certainty about business systems restoration and availability immediately after any business disruption.
- **Minimise downtime and save money** – reducing the amount of lost productive work time, reduces money lost, reduces lost clients and most importantly guarantees cash flow for your business
- **Flexibility of the solution** – Our solutions accommodate changes to your business and evolutions to your DR plans, so that as you expand, the solution expands with you.
- **Diversity increases reliability** – The off-site replication and mirroring of crucial business data across multiple different geographic locations, ensures that data is always ready to be restored swiftly, providing minimal down time.
- **Whole-of-business DR planning** – Ranging from provision of desk space, hardware requirement planning to data recovery management .
