SIMPLIFY, CONSOLIDATE AND EVOLVE
YOUR WORKPLACE TECHNOLOGY WITH A COMPLETE, INTEGRATED AND FULLY SUPPORTED SOLUTION FROM BRENNAN IT

Take advantage of Brennan IT's licensing, device leasing and support, and managed services for Microsoft 365.

Microsoft 365

Integrating Office 365, Windows 10 and Enterprise Mobility + Security, Microsoft 365 offers a new, intelligent and secure way to empower workers and create a truly modern workplace.

Why choose Microsoft 365?

Take advantage of the security and innovation of Windows 10: Microsoft 365 standardises your devices on Windows 10; the most secure Windows ever.

Work more productively: give your people a raft of new, exciting tools to help them work as productively as possible, and to share information regardless of where they are working or which device they're using.

Tighten your security: safeguard your company data across PCs, phones and tablets, and help protect against the very latest security threats with automatic updates.

Mobile application data and device management: Microsoft 365 includes in-built protection for your information and your devices – even personal ones.

Managed Services

Today's IT managers are continually forced to do more with less – responding to employees' demands for flexibility and mobility; ensuring a high level of security; and ensuring the overall IT infrastructure is scalable and cost-effective. It's for this reason Brennan IT has developed a managed service specifically built around M365.

How can Brennan IT help?

Comprehensive support services: our managed service includes day-to-day technical support; data back-up and recovery; management of user accounts and profiles, device support and mobile device management as well as application support.

27/7 end-user support: our service desk operates every day of the year, to provide your end users and internal technical team with the support they need – when and where they need it.

Pre-configured Windows 10-based Brennan IT Standard Operating Environment (SEO) image: our SEO image is developed and maintained by Brennan IT and updated quarterly with the latest Windows features available.

Modern Devices

To do their best work, people need access to quality devices. Keeping devices up to date also enables businesses to take advantage of innovative new software solutions like Microsoft 365. It's why Brennan IT has now partnered with a range of hardware and device specialists to deliver a range of modern device offers, available on pay-per-month leasing arrangements.

Why engage Brennan IT to manage your hardware for you?

Asset reporting: we can help you stay on top of your hardware, with a monthly report on your assets, including your serial numbers, number of devices, and term of agreement.

Asset recovery: we facilitate a smooth refresh process, with easy equipment returns, secure data destruction and regulatory-compliant, environmentally-sustainable disposal and recycling options.

Certified data wipes: when an employee leaves the business, we can conduct a certified data wipe (DoD 5220.22-m). We offer a 3-pass as standard and can provide a 7-pass data wipe for an additional cost if required.
